Domicile : Tema - Ghana

Languages Spoken : English, Twi

Education : General Science -

Benkum Senior High School

TECHNICAL SKILLS

UI/UX Design

HTML

CSS

SASS

JavaScript

React JS

Redux

React Router

Tanstack / React Query

React Hook Form

Node JS

Strapi

Next JS

Python

PyQt5

Object Oriented Programing

Adobe XD

Figma

Git / GitHub

React Native

PERSONAL PROJECTS

PENSIVE

<https://pensive-pub.vercel.app>

- Developed a full stack application with Strapi CMS, React JS, React Query, React Router and other libraries for writers to share their writings and interact with their audience and other writers.
- Configured the Strapi CMS with a Neon serverless postgres database and a cloudinary account to manage the media library.
- Conducted surveys to get feedback from writers on the user interface of the web application, and to get a list of features they would like to see implemented in the web application.
- Created high fidelity designs based on user feedback, incorporated with frequently requested features and gave a preview to a handful of users for a final review before implementing the design in JSX.
- Implemented sign in and sign up, JWT authentication, CRUD operations, and a private "/Profile" route with various input fields where users can create, delete and mutate posts with just a button click.
- Deployed the Frontend to vercel, set up environment variables and all necessary configurations and deployed the Backend on Render.

PORTFOLIO WEBSITE (In Development)

<https://makay-dev.vercel.app>

- Developed a responsive, user-friendly interface to advertise my skills and other personal information.
- Utilized the modularity of Sass and React JS to create a component based application with a neatly organized folder structure and a well organized codebase.
